

# Jacquet Weston Engineering Drying Cabinet

**This versatile drying cabinet is designed to fit into a small space and operate off a 13amp ring main.**

The cabinet is fitted with a 3KW single phase electric fan heater which circulates hot air over the electroplated or anodised components. The design is such that the components can be left on their racks, which are hung on horizontal rails at the top of the cabinet. A drainage grille is fitted in the bottom.

The drying compartment is 3ft x 4ft deep (914mm x 914mm x 1219mm). Manufactured from solid mild steel, the cabinets are painted with an anti-corrosive primer followed by a chlorinated rubber finish.

The new drying cabinets can be fitted with external lagging, if desired, to suit customers' requirements. Overall size: 3ft 0in x 3ft 0in x 6ft 5in(914mm x 914mm x 1956mm).
